BC 254, Station 14
CH-1015 Lausanne

RESEARCH INTERESTS

Decentralized systems
Applied cryptography
Security and Privacy for Data Sharing
Privacy-enhancing technologies
Genomic Privacy

CODING SKILLS (main)

Golang, Java, Latex

EDUCATION

Master of engineering in communication systems specialized in IT security
Ecole Polytechnique Fédérale de Lausanne | 2016

Bachelor of engineering in communication systems
Ecole Polytechnique Fédérale de Lausanne | 2014

PROFILE

Post-Doctoral Researcher. I am working with Prof. B. Berger in the Computer Science and Artificial Intelligence Laboratory (CSAIL) at the Massachusetts Institute of Technology (MIT) and with Dr. H. Cho at the Broad Institute of MIT and Harvard. **I am currently working on privacy-preserving federated analytics and genomic privacy by relying on homomorphic encryption, secure multiparty computation, distributed systems and differential privacy.**

I received my PhD from the Ecole Polytechnique Fédérale de Lausanne (EPFL) for my work with Prof. Jean-Pierre Hubaux at the Laboratory for Data Security (LDS) and Bryan Ford at the Decentralized and Distributed Systems Laboratory (DeDiS). I earned my MSc and BSc in Computer Science with a specialisation in IT Security from EPFL in 2016. In 2015, I did a master thesis internship in the NEC research laboratory in Heidelberg, Germany, where I have been involved in the design and implementation of a system enabling proofs of retrievability on deduplicated data.

EXPERIENCE

Post-Doctoral Researcher
MIT & Broad Institute | USA | 2022 - present
Prof. B. Berger's group in Computer Science and Artificial Intelligence Laboratory (CSAIL) at the Massachusetts Institute of Technology (MIT) and
Dr. H. Cho's group at the Broad Institute of MIT and Harvard

Post-Doctoral Researcher
EPFL | Switzerland | 2021
Laboratory for data security (LDS, led by Prof. Jean-Pierre Hubaux) and
Decentralized and Distributed Systems Lab (DeDiS, led by Prof. Bryan Ford)

Ph.D. Student
EPFL | Switzerland | 2016 - 2021
Laboratory for data security (LDS, led by Prof. Jean-Pierre Hubaux) and
Decentralized and Distributed Systems Lab (DeDiS, led by Prof. Bryan Ford)

Research Assistant
EPFL | Switzerland | 2016
Laboratory for data security (LDS)

Master Thesis
NEC Laboratories Europe | Heidelberg, Germany | 2015 - 2016
Analysis of Security Primitives for Public Clouds. Implementing Proofs of Retrievability in Deduplicated Storage Systems.

Master Projects
EPFL | Switzerland | 2013- 2014
- Implement a zero-configuration peer-to-peer network for Map Reduce.
- Dynamically display historical data on Google Earth and enable users to navigate through the use of a Kinect.

PhD Thesis

Privacy-Preserving Federated Analytics using Multiparty Homomorphic Encryption
[thesis][slides 1][slides 2]

Talks & Awards

7th International Workshop on Genome Privacy and Security (GenoPri'20)
Online | 2020
Presentation on Privacy-Preserving Multi-centric Medical Research with Multi-party Homomorphic Encryption.
[website][talk (at 1h34)][slides]

Microsoft Private AI Bootcamp
Redmond, Washington, USA | 2019
30 selected Ph.D. students invited to a bootcamp with Microsoft Research.
[website][talk][tech report]

IDash Privacy & Security Workshop – Secure Genome Analysis Competition 2019
Indianapolis, Indiana, USA | 2019
Presentation of runner-up solution in Track II: Secure Genotype Imputation using Homomorphic Encryption.
[website] [blog] [talk]

Short Presentation of research interests
Lausanne, Switzerland | 2019
[talk]

Reviewer Activities

International Society for Molecular Biology (ISMB) | 2022-present

Privacy Enhancing Technologies Symposium | 2019 & 2021

Digital Signal Processing Journal | 2018-present

Teaching

Master Thesis Supervision
EPFL | 2019
- *"Privacy-Preserving Statistics on Medical Data Using Homomorphic Encryption"*, John Stephan at Swisscom, Switzerland.
- *"Efficient Privacy-Preserving Neural Network Inference for Heart Arrhythmia Detection"*, Philipp Chervet at CSEM, Switzerland.

Semester Projects Supervision
EPFL | 2017-present
- 1 Bachelor project
- 12 Master projects
- 2 Summer at EPFL projects

Teaching Assistant
EPFL | 2017-present
- Mobile Network, Master
- Information Security & Privacy, Master
- Advanced Topics on Privacy Enhancing Technologies, Master
- Introduction to Object-oriented Programming, Bachelor

Recreation

Cycling, tennis, badminton, football, squash, ski, guitar, travel

Main Projects

DPPH: Data Protection in Personalized Health funded by the Strategic Focus Area Personalized Health and Related Technologies (PHRT) of the ETH Board. 2018-2021 | Budget: CHF 3M
This project aims at providing a secure and privacy-conscious framework to enable clinical and genomic data sharing and exploitation across a federation of medical institutions, hospitals and research labs.
Academic partners: Fellay Group, DeDiS, LDS, GR-JET (EPFL) and Health Ethics and Policy (ETH). Industrial partners: SDSC.

MedCo: Enabling the Secure and Privacy-Preserving Exploration of Distributed Clinical and *Omics Cohorts in the Swiss Personalized Health Network (SPHN) funded by the PHRT and the SPHN.
2019-2021 | Budget: CHF 0,5 M
This project aims at testing and deploying in operational environments secure and privacy-conscious cohort explorers dealing with distributed clinical and *omics data.

Software Projects (main)

Spindle
https://github.com/ldsec/spindle (private) | 2020 - present
Spindle is a distributed system for the secure and federated training and evaluation of machine learning models (linear/logistic regression, neural networks) on data from multiple sources. It makes use of lattice-based cryptography (*lattigo*). Developed in Golang at the LDS group at EPFL.

iDash solution 2019
https://github.com/ldsec/idash2020 (private) | 2019
Homomorphic encryption-based realization of a client-server privacy-preserving solution for genotype imputation based on the lattice-based homomorphic encryption scheme CKKS. Solution presented in the Homomorphic Encryption track of the iDash Secure Genome Processing Challenge in its 2019 edition (third place). Developed in Golang at the LDS group, EPFL.

Lattigo
https://github.com/ldsec/lattigo
Lattigo is a Go package implementing centralized and multiparty lattice-based cryptographic primitives. Developed in Golang at the LDS group, EPFL.

MedCo
https://medco.epfl.ch
MedCo is the first operational system that makes sensitive medical-data available for research in a simple, privacy-conscious and secure way. It enables hundreds of clinical sites to collectively protect their data and to securely share them with investigators, without single points of failure. The core module is developed in Golang, with additional modules and connectors in Javascript, Java and Scala.

Drynx
https://github.com/ldsec/drynx
Drynx is a library implementing secure multiparty protocols, homomorphic encryption, zero-knowledge proofs and blockchains in order to support a decentralized system that enables privacy-preserving statistical queries and the training and evaluation of machine-learning regression models on distributed datasets. It provides data confidentiality and individuals' privacy, and ensures

the correctness of the computations, protects data providers' privacy and guarantees robustness of query results. Developed in Golang at the LDS group, EPFL.

UnLynx
https://github.com/ldsec/unlynx
Unlynx is a library implementing interactive protocols to perform distributed cryptographic operations such as key switching and Neff shuffle. The developed prototype is at the core of the operational software, MedCo, that is being deployed at the Swiss University Hospitals. Developed in Golang at the LDS group, EPFL.
