EPFL IC IINFCOM LDS

BC 254, Station 14

CH-1015 Lausanne

RESEARCH INTERESTS

Decentralized systems

Applied cryptography

Security and Privacy for Data Sharing

Privacy-enhancing technologies

Genomic Privacy

CODING SKILLS (main)

Golang, Java, Python, C++, Latex

EDUCATION

Master of engineering in communication systems specialized in IT security

Ecole Polytechnique Fédérale de Lausanne | 2016

Bachelor of engineering in communication systems

Ecole Polytechnique Fédérale de Lausanne | 2014

PROFILE

I am a 5th year PhD student under the supervision of Prof. Jean-Pierre Hubaux at the Laboratory for Data Security (LDS) and Bryan Ford at the Decentralized and Distributed Systems Laboratory (DeDiS), at the Ecole Polytechnique Fédérale de Lausanne (EPFL). I earned my MSc and BSc in Computer Science with a specialisation in IT Security from EPFL in 2016. In 2015, I did a master thesis internship in the NEC research laboratory in Heidelberg, Germany, where I have been involved in the design and implementation of a system enabling proofs of retrievability on deduplicated data.

I am currently working on privacy-preserving federated data analytics by relying on homomorphic encryption, secure multiparty computation, distributed systems and differential privacy.

EXPERIENCE

Ph.D. Student

EPFL | Switzerland | 2016 - present

Laboratory for data security ([LDS](#)) and Decentralized and Distributed Systems Lab ([DeDiS](#))

Research Assistant

EPFL | Switzerland | 2016

Laboratory for data security ([LDS](#))

Master Thesis

NEC Laboratories Europe | Heidelberg, Germany | 2015 - 2016

Analysis of Security Primitives for Public Clouds. Implementing Proofs of Retrievability in Deduplicated Storage Systems.

Master Projects

EPFL | Switzerland | 2013- 2014

- Implement a zero-configuration peer-to-peer network for Map Reduce.

- Dynamically display historical data on Google Earth and enable users to navigate through the use of a Kinect.

Main Projects

- **DPPH: Data Protection in Personalized Health funded by the Strategic Focus Area Personalized Health and Related Technologies (PHRT) of the ETH Board.** 2018-2021 | Budget: CHF 3M
This project aims at providing a secure and privacy-conscious framework to enable clinical and genomic data sharing and exploitation across a federation of medical institutions, hospitals and research labs.
Academic partners: Fellay Group, DeDiS, LDS, GR-JET (EPFL) and Health Ethics and Policy (ETH). Industrial partners: SDSC.
- **MedCo: Enabling the Secure and Privacy-Preserving Exploration of Distributed Clinical and *Omics Cohorts in the Swiss Personalized Health Network (SPHN) funded by the PHRT and the SPHN.** 2019-2021 | Budget: CHF 0,5 M
This project aims at testing and deploying in operational environments secure and privacy-conscious cohort explorers dealing with distributed clinical and *omics data.

EURASIP Journal on Information Security | 2018 - present

Journal of Visual Communication and Image Representation | 2018 - present

International Conference on Information Systems Security and Privacy | 2016

Teaching

Master Thesis Supervision

EPFL | 2019

- "Privacy-Preserving Statistics on Medical Data Using

Homomorphic Encryption", John Stephan at Swisscom, Switzerland.

- "Efficient Privacy-Preserving Neural Network Inference for Heart Arrhythmia Detection", Philipp Chervet at CSEM, Switzerland.

Semester Projects Supervision

EPFL | 2017-present

- 1 Bachelor project
- 12 Master projects
- 2 Summer at EPFL projects

Teaching Assistant

EPFL | 2017-present

- Mobile Network, Master
- Information Security & Privacy, Master
- Advanced Topics on Privacy Enhancing Technologies, Master
- Introduction to Object-oriented Programming, Bachelor

Recreation

Cycling, tennis, badminton, football, squash, ski, guitar, travel

Software Projects (main)

Spindle

<https://github.com/ldsec/spindle> (private) | 2020 - present

Spindle is a distributed system for the secure and federated training and evaluation of machine learning models (linear/logistic regression, neural networks) on data from multiple sources. It makes use of lattice-based cryptography (*lattigo*). Developed in Golang at the LDS group at EPFL.

iDash solution 2019

<https://github.com/ldsec/ldash2020> (private) | 2019

Homomorphic encryption-based realization of a client-server privacy-preserving solution for genotype imputation based on the lattice-based homomorphic encryption scheme CKKS, as a solution to the Homomorphic Encryption track of the iDash Secure Genome Processing Challenge in its 2019 edition (third place). Developed in Golang at the LDS group, EPFL.

Lattigo

<https://github.com/ldsec/lattigo>

Lattigo is a Go package implementing centralized and multiparty lattice-based cryptographic primitives. Developed in Golang at the LDS group, EPFL.

MedCo

<https://medco.epfl.ch>

MedCo is the first operational system that makes sensitive medical-data available for research in a simple, privacy-conscious and secure way. It enables hundreds of clinical sites to collectively protect their data and to securely share them with investigators, without single points of failure. The core module is developed in Golang, with additional modules and connectors in Javascript, Java and Scala. Developed in Golang at the LDS group, EPFL.

Drynx

<https://github.com/ldsec/drynx>

Drynx is a library implementing secure multiparty protocols, homomorphic encryption, zero-knowledge proofs and blockchains in order to support a decentralized system that enables privacy-preserving statistical queries and the training and evaluation of machine-learning regression models on distributed datasets. It provides data confidentiality and individuals' privacy, and ensures the correctness of the computations, protects data providers' privacy and guarantees robustness of query results. Developed in Golang at the LDS group, EPFL.

UnLynx

<https://github.com/ldsec/unlynx>

Unlynx is a library implementing interactive protocols to perform distributed cryptographic operations such as key switching and Neff shuffle. The developed prototype is at the core of the operational software, MedCo, that is being deployed at the Swiss University Hospitals. Developed in Golang at the LDS group, EPFL.
